HEY!

If you're reading this, you've used our zine generator and answered 3 questions about surveillance. This zine is your personal starter emergency kit.

It highlights the dangers of surveillance + ++ gives you first tips to protect yourself from data access by 1312

TOPICS TOPICS TOPICS

Location & movement 3
Communication 4-5
Online profiles & data 6-7
Resources 8

No tool offers full protection – but this zine gives you a starting point to protect yourself and keep learning.

LET'S GO!

NO COMPLETE GUIDE!

2. Module 1, Answer A

GPS, WLAN & Bluetooth

You thought Maps only shows you the way? Not just you. Your phone constantly sends signals:

GPS shows your exact location.
Apps collect this data.

WLAN & Bluetooth send unique device IDs (e.g., when searching for networks) – even without connection.

How data is collected & used:

Sensors in public places capture these signals, track your movements, and create movement profiles. Authorities can, via court order locate all devices in an area at a specific time. They can also buy this data from Databrokers.

Protection Check:

- Turn off location services & location history
- Revoke location access from apps – Activate airplane mode (prevents real-time tracking) ♦ Use an extra device

BURNER PHONE

4. Module 2: Block C

Content Scanning & Backdoors: When Your Messages Are Read

Private chats aren't always as private as they seem — even encrypted messages can be at risk.

Content Scanning (ChatControl)

Some politicians are pushing for messengers to scan your messages on your device before they're encrypted — aiming to detect certain content. This breaks the idea of end-to-end encryption, since messages must be readable before they can be protected.

Backdoors

These are intentionally built-in weaknesses in software or services that allow third parties (such as law enforcement or hackers) to access data without breaking the normal encryption. One example is how Meta could access WhatsApp metadata for years.

5.

Protection Check:

Use messengers with **true E2EE:**
Choose services with default end-to-end encryption

Prefer **open source:**
Pick messengers with open code (e.g. Signal, Element) — this allows independent security audits.

Share sensitive **info securely.**
Only send private data via E2EE chats or trusted tools like ProtonMail (email) or Tresorit (cloud storage).

Stay informed: Follow political debates like the EU's "chat control" proposal, which threatens secure communication.

6. Module 3: Block C

Your Online Profile

+social media analysis

All your online activities — searches, social media, websites, purchases, and app use—are collected and combined into a detailed digital profile.

This profile reveals not only your interests but also preferences, political views, social networks, and even emotional states. The targeted ads you see show how precisely algorithms predict your needs and fears based on this data.

For law enforcement, such profiles are a treasure. They use them for open source intelligence (OSINT), predictive policing, and targeted surveillance to identify and monitor individuals.

7.

Protection Check:

- Share mindfully: Only share what feels necessary online.
- Adjust privacy settings: Check and update your settings on social media and apps.
- Keep identities separate: Use different emails or profiles for different activities.
- Be aware: Notice the digital footprints you leave.
- Check regularly: See what data companies have about you and manage it.

8.

Resources:

As you see Surveillance tech is everywhere – from AI analyzing messages to mass tracking in public. These tools keep evolving.

Digital security is a process. Staying informed and sharing what you learn helps everyone stay safer !!!
